

SearchApp

Android application to display search information.

I have used **MVP** architecture for this project.

Technologies

1. XML
2. Java
3. Android SDK
4. Rest API's.

Libraries

1. RecyclerView.
2. Glide library.
3. Retrofit

User Stories

The following required functionality is completed:

Accept user input for queries.

Pass along that user input query to the API.

Displaying the result.

User can ****successfully retrieve the results **** from the search term.

User can also see an image in the list.
